

A METHOD OF IMPLEMENTING CASHLESS PLAY OF GAMING DEVICES
INTERCONNECTED BY A COMPUTER NETWORK

5

ABSTRACT

10 A method for transferring credits between gaming devices connected by a network to
a host computer comprising. A player account accessible by the host computer is created.
The player can access the account by inserting a card into a card reader at one of the gaming
15 devices. A casino employee may apply credit to the account responsive to receipt of funds
from the player. A predetermined amount of credit is transferred from the account to an EGM
responsive to a command entered by the player at the EGM. Alternatively, the player applies
a credit to the gaming device, typically by inserting bills into a bill acceptor. The credit and
any awards resulting from gaming-device play are stored on a credit meter associated with
20 the gaming device. Access to the account is terminated when the player withdraws the card
from the card reader. A player initiates a request to redeem the balance stored on the credit
meter by depressing a cash-out button. The balance on the credit meter is transferred to the
player account if the cash-out button is pressed before the card is withdrawn, and is paid to
the player via the gaming machine if the button is pressed after the card is withdrawn. All
transactions are backed up on a database.
